

Privacy Policy for Dynamik

Last Updated: August 13, 2026

Your privacy is paramount. Dynamik is built with a local-first philosophy. We do not sell, track, or share your personal data with third-party networks or data brokers.

1. Integration with Apple Frameworks

Dynamik leverages advanced iOS features to run smoothly, handling your data locally and securely:

- **HealthKit (Step Counting & Fitness Data):** Dynamik accesses Apple's HealthKit to read your daily step counts and workout progress. This information is processed strictly on your device to display your metrics. We do not transmit health metrics to external servers or use them for advertising or marketing.
- **MapKit (Location & Route Tracking):** MapKit processes location data entirely on-device to track and map your physical walks. Your real-time location data is never sent to us or tracked in the background without active permission.
- **GameKit (Achievements & Communities):** Dynamik uses GameKit to manage leaderboards, achievements, or multi-player interactions. GameKit data is tied directly to your Apple Game Center profile, governed entirely by Apple's own system privacy practices.
- **On-Device Foundation Models (AI Features):** Any AI processing or smart features powered by Foundation Models run entirely on-device. No data, text inputs, or walking metrics are ever uploaded to cloud servers for AI training.

2. Optional Community Walk Sharing (CloudKit)

Dynamik features an optional community portal that allows you to share your favorite walks:

- **User-Initiated Sharing:** Walking routes are only shared if you explicitly choose to publish them to the community feed.

- **Anonymised Data via CloudKit:** Community walks are shared using Apple's [CloudKit Public Database framework](#). The app strips away personal indicators; shared paths are strictly anonymous routes and metric summaries.
- **No Personal Information Shared:** We do not attach names, email addresses, phone numbers, or hardware IDs to community-submitted walks.

3. Analytics, Advertising, and Storage

We protect your digital footprint across the board:

- **No Third-Party Analytics:** We do not track your app behavior or feature engagement via external trackers.
- **No Advertisements:** Dynamik features no ad networks, preventing third parties from building profiles about you.
- **iCloud Encryption:** Private data synchronisation across your personal devices is managed via your private iCloud account.

4. Your Rights and Data Control

Under standard privacy laws (including GDPR and CCPA), you remain in complete control of your data:

- **Revoking Access:** You can change or completely turn off location permissions or HealthKit data access at any time via your iOS **Settings > Privacy & Security**.
- **Deleting Content:** If you wish to delete a walk you can remove it directly inside the app.

5. Contact Us
